

MASTER OF SCIENCE IN REGULATORY COMPLIANCE

ONLINE AND ON CAMPUS

Learn to navigate the regulations that impact your field

Regulatory compliance is an increasingly important priority for all kinds of organizations — especially those in healthcare and clinical research. As a result, career opportunities are growing for those with the kind of training students receive in Northwestern's MS in Regulatory Compliance program.

Graduates of the program learn from a faculty of industry experts and are prepared for important roles in areas such as pharma, healthcare, and life sciences, as well as food and medical device development. Choose from three distinct tracks — healthcare compliance, clinical research and quality systems — to adapt the program to your needs and goals.
